

Project Summary

Summary · Coffee Bar — worked example

PROBLEM, GOAL & BASELINE

Espresso-drink orders take too long from register to handoff during the weekday morning peak, producing walk-aways, comped drinks, remakes, and peak-end overtime.

Goal: Reduce average order-to-handoff time during the weekday 7:00-10:00 peak from 8.4 minutes to 5.0 minutes by October 31, 2026.

Baseline → target: 8.4 minutes → 5 minutes by Oct 31, 2026

DATA IMPORTED

40 rows imported from coffee-check-sheet-check-sheet.csv (most recent of 2 datasets saved in this project)

TOP CATEGORIES

40 marks tallied on the check sheet, across 5 categories in use. Top 4 shown here; the full ranking is in the Check Sheet report.

Category	Count	Share
Drink-queue backlog	22	55.0%
Grinder rework (re-pull)	10	25.0%
Milk steaming queue	4	10.0%
Mid-peak restock run	3	7.5%

FISHBONE CAUSES

11 causes on the fishbone; 5 verified. Shown below; 6 more still unproven.

- Marked cups pile up in the single drink queue ahead of the espresso station.
- +4 more verified causes -- see the Fishbone report.

SUGGESTED NEXT STEP — not a computed result

Top-ranked countermeasure on file: "Batch milk steaming + marked-cup sequencing at the drink-build step" (quick win). Pilot it and bring the before/after numbers back. Owner: Priya Shah, by Oct 31, 2026.
